Wellbayt AI Growth Challenge

Tanishk Kamra | tanishkkamra@gmail.com | Available full-time, immediately

The idea in one line: do not blast more cold emails. Show up with the right message at the moment a company has a reason to care, and use AI and automation to spot those moments, research them, and prepare the conversation. I review and send. Nothing goes out without a human check.

Part A. Three ways to find and start genuine conversations

1. Moment Radar: reach companies at the moment of change

Wellbeing budgets move when something changes: a new HR leader, a new office, a hiring wave, a workplace award. AI watches public news and job feeds for these triggers, ranks companies by trigger strength and freshness, and drafts an opener that refers to the real event. The opener says why now, not who we are.

Company (real, from my live run on 21 Oct 2026)	Signal	Why target	How I would approach
Keolis	Opened a regional HQ in Dubai (6 days ago)	Transport operator with shift-based and frontline staff. A new regional team is forming, so culture and retention are set early.	Note to the regional HR/People lead: congratulate on the HQ, offer a short onsite movement and wellbeing session for the first cohort, designed around shift patterns.
Dior	Opened a 7,200 sqm Dubai South hub (about 30 days ago)	A logistics and distribution site means a large on-feet workforce with physical strain and fatigue, a natural fit for movement and ergonomics workshops.	Approach the hub's HR/operations lead with a practical "healthy shift" pilot: short stretch breaks, posture workshop, a team step challenge. Offer to run a single pilot day.
Workday	Launched UAE operations and a Dubai office (about 20 days ago)	They sell to HR leaders, so they know the value of wellbeing. A new UAE team is being built and onboarded now.	Offer an onboarding-week wellbeing activation and a movement challenge that builds the new Dubai team's bonds. Position it as a culture launch, not a vendor pitch.

2. Calendar-led challenges HR can say yes to

Instead of "can we sell you a workshop", offer a ready-made participation moment tied to a date HR already cares about: World Mental Health Day (10 October), Ramadan, the annual Dubai fitness season, new-year budget planning, and UAE working-week changes (the shorter working week is already prompting workload questions in the press). AI maps each target company's industry and size to the best date, then writes a one-page "company challenge" they can join in a click.

3. Give-first "Wellbeing Snapshot"

For the top-ranked companies, AI builds a one-page snapshot from public information only: size and sites, shift patterns implied by their industry, recent news, and three suggested programmes with expected outcomes. I send it as a gift with a short note. It shows we did our homework and gives HR something to forward internally. Quality matters over volume: about 10 snapshots a week, each checked by me.

> **Why this beats cold email:** every message cites a real event, a real date, or a real need. Replies come from relevance, not volume. It also feeds the CRM with the context you need for the discovery meeting.

Part B. Working component: the Opportunity Radar

A small program that does approach 1 end to end. It is real, runs from one command, and uses no paid services.

How it works

- **Detect:** searches free public news feeds for five trigger types (new HR leader, office expansion, hiring surge, workplace award, wellbeing announcement), limited to the UAE and wider Gulf.
- **Clean:** drops irrelevant results (schools, tourism, reviews) and pulls out the company name from each headline.
- **Score:** trigger weight multiplied by freshness, plus a bonus when one company shows several triggers.
- **Prepare:** writes a draft opener that references the real event, plus the target roles (Head of HR, People & Culture, Employee Experience) and the source link as evidence.
- **Output:** `leads.csv` (ready to import into any CRM or Google Sheet) and `report.html` (a ranked review queue). Run it with `python radar.py`.

Result from the live run (21 Oct 2026)

12 ranked companies from five queries in a few seconds, including Keolis, Dior, Workday, EQT and Advent, each with source link and draft opener. Screen recording shows the run, the ranked report, and one lead opened with its evidence.

What it costs to operate

- **Today: $0.** Standard Python and free public feeds. No paid API, no LLM calls.
- **Optional upgrades:** an LLM (a small model costs a few cents per 100 leads) for better openers; a data tool such as Apollo or Hunter on a free tier for contact enrichment; Make or n8n to push approved leads into the CRM and start follow-up sequences.

How I would maintain it

- Schedule a weekly run (Windows Task Scheduler or a free GitHub Action). About 30 minutes a week to review the queue.
- Track which signals produce replies and meetings, then adjust weights and queries monthly. Add new signals (job posts for HR and wellbeing roles, event sponsorships) as they prove useful.

> **Honest limits:** company-name extraction is rule-based and sometimes picks the wrong name, so a person checks every lead before outreach. News headlines miss quieter signals. The next step is an LLM extraction pass and verified decision-maker contacts. No real prospects were contacted for this exercise.

Part C. My first 30 days

Week	Focus	I personally do	Output
1	Learn the business	Sit in on your calls and proposals, learn the offers, pricing logic and past wins. Write the ideal customer profile and 3 message angles with you. Set up the CRM pipeline and the radar on live data.	ICP, offer one-pager, working pipeline
2	Build the target list and start manual outreach	Research 60 accounts, map HR decision-makers, send the first 30 hand-written, signal-based messages. Log every reply and objection.	60 researched accounts, 30 conversations started
3	Learn what works, then automate it	Double down on the angles that got replies. Automate enrichment, follow-up reminders and meeting-booking links	Automated follow-ups, 10 snapshots sent

		for those angles. Send the first Wellbeing Snapshots.	
4	Run and review	Run the full weekly cycle, hand qualified meetings to you with a briefing note, and review results with you.	First intro meetings booked, report with next-month plan

How I measure progress

- **Leading:** accounts researched, personalised messages sent, reply rate, positive reply rate.
- **Outcome:** qualified conversations and introductory meetings booked per week; then meetings that become proposals.
- **Targets to agree together:** a starting aim of about 150 accounts researched and 5 to 8 intro meetings by day 30. These are placeholders; we set the real numbers once I see your conversion history.
- **Weekly check-in:** a one-page dashboard from the CRM so you see the funnel, and what I will change next.

Availability: full-time, remote, starting immediately once terms are agreed.
